

What if Bornholm was the only place to eat real food?

We imagined a world in which humans don't experience the food anymore and they only ingest portions of nutrients, which are synthetically produced.

The future of eating

Food serves just to sustain human body, not for pleasure of eating

In these portions, there are all the nutrients and medicines that humans may need and they are developed to suit every individual's necessity. On the other hand, the experience of nutrition is not a pleasure anymore, just a simple daily task to fulfil in order to survive.

Why come to Bornholm?

Bornholm as a self-sustaining haven where people can eat “real” food

And in this sad and grey world, where the space for nature is no longer there anymore, we imagined the last heaven: the only place where you can still eat real food, Bornholm Island.

What will it be “real food” in the future?

How far would modification go?

Throughout the decades new species of fruit and vegetables, replaced the ones that humans were used to eat in the past. These products were developed by a process of hybridisation between different vegetables and different species. But now they can only be found on the Island.

Humans subjected to nature

Emotionally and mindfully grown plants and animals as a new organic label of food

On Bornholm, people must take care of and give special treatments to Nature in order to eat real food. People must pay respect to natural world through manual labour and rituals like meditation, accompanied by ancestral sounds played by organic musical instruments.

These instruments convey spiritual energy both to plants, animals and humans and help them regain awareness over their soul.

People from around the world come to Bornholm to experience Real Food and undergo a spiritual awakening.

Humans subjected to nature: pampering tools

Humans become a part of food chain rather than being on top of it

Thanks to Pampering instruments, we physically take care of the whole natural world - from animals to plants - to show humanity a new reality where they aren't on top of the food chain anymore and in which in fact, they are subdued by nature itself. For example, here you can see a device that people carry on their shoulders to become nothing more than a Co2 source for plants.

Synthetic growing machines to provide supplements to diet

How far would food modification go?

And finally, you can see a Synthetic growing machine which is used to generate synthetical portions and replicas of food that is not cultivable on the island. During their retreat, people will taste some gourmet dishes made by what can be grown on the island and completed by some synthetically produced ingredients.

Global food salvation movement

Re-establish your emotional connection to Food.
Real Food.

Bornholm could become a Green Island, wellness retreat that puts focus on educating about sustainable food production

Green Island

**Enhancement
instead of
exploitation**

Promoting enhancement of environment through respectful attitude and that taking care of plants and animals.

Obtaining sustainability by determining what should be on demand rather than producing food on demand

**Dictating
demand
instead of
producing on
demand**

**Holistic
food experience**

Offering holistic spiritual food experience by involving visitors in actual food production.

Global food salvation movement

Re-establish your emotional connection to Food.
Real Food.

In this vision, the Global Food salvation Movement, chose Bornholm as the Green Island.

Here, people can join a wellness retreat that puts focus on educating about sustainable food production, by involving visitors in the actual manual labour process, while offering holistic spiritual food experience.

Global Food Salvation movement promotes the enhancement of the environment through a respectful attitude and taking care of plants and animals.

Through this experience people have the opportunity to understand the real meaning of being part of this old new world.

Thank you!
...may the Holy Broccoli be with you.
